**Suppl. Figure 1** MPs and Exos exert immunosuppressive function on T lymphocyte subsets. Representative images of CD8+IFN-γ + cytotoxic T cells, CD4+IFN-γ+ Th1 cells, CD4+IL-10+ Tr1 cells and CD4+CD25+Foxp3+ Treg cells in splenocytes (n=4) when incubated alone (Ctrl) or with naïve MSCs (MSCs) or with 25 ng of Exos or MPs by flow cytometry analysis.
