

Supplementary Figure S1. Photographs of 4T1-bearing mice in different groups at 6, 12, 18 days after different treatments.

Supplementary Figure S2. Images of tumors excised from each group of mice 19 days after treatment. The tumors were weighed and the average weight was calculated. A: 4T1-bearing mice were treated with 50 J/cm² light and different DVDMS dose (0.5, 1, 2 mg/kg). B: 4T1-bearing mice were treated by 2 mg/kg DVDMS combined with different light dose (50, 100, 150 J/cm²). C: 4T1-bearing mice were treated by 2 mg/kg DVDMS or 10 mg/kg PF with 100 J/cm² light. * $p < 0.05$, ** $p < 0.01$ versus control and DVDMS alone, ### $p < 0.01$, 2 mg/kg DVDMS + 100 J/cm² light group versus 10 mg/kg PF+ 100 J/cm² light group.
