Table S5. Tumor initiating cell frequency of each group calculated using ELDA software.

Cell line used for tumor xenograft model	Group	Tumor initiating cell frequency			Fold change	P value
		Lower	Estimate	Upper		
H460	Control	1/311	1/109	1/38.2	128.5	1.27×10^{-10}
H460	Evodiamine	1/55703	1/14002	1/3519.9		
MDA-MB-231	Control	1/128	1/46	1/16.8	61.8	4.9×10^{-9}
MDA-MB-231	Evodiamine	1/6870	1/2843	1/1176.5		

Table S6. IC₅₀ values of evodiamine against cancer cell viability.

Cell line	IC ₅₀ (μM)
H1299	2.35
A549	0.73
H460	0.87
H226B	1.97
HCT116	1.29
MDA-MB-231 (MDA-231)	1.18

Table S7. Synergistic effect of the combinatorial treatment between evodiamine and chemotherapeutic drugs.

Experiment	Treatment A	Treatment B	Expected ¹⁾	Observed	Index ²⁾
MTT assay	Evodiamine 5 µM	Carboplatin 50 µM	0.337	0.267	1.26
		Carboplatin 100 µM	0.326	0.260	1.25
		Carboplatin 200 µM	0.285	0.263	1.08
MTT assay	Evodiamine 5 µM	Paclitaxel 5 nM	0.358	0.227	1.58
		Paclitaxel 10 nM	0.342	0.250	1.37
		Paclitaxel 20 nM	0.308	0.256	1.20
Colony formation assay	Evodiamine 0.5 µM	Carboplatin 10 µM	0.134	0.067	2.02
		Paclitaxel 10 nM	0.085	0.013	6.40

¹⁾Expected: growth inhibition rate of treatment A x growth inhibition rate of treatment B

²⁾Index: Expected growth inhibition rate / Observed growth inhibition rate

Figure S1. A representative result from analysis of mycoplasma contamination in cancer cells.

Figure S2. Gating strategy to isolate GFP^{high} and GFP^{low} populations.

Figure S3. Synthetic scheme for the synthesis of evodiamine (Evo). Reagents and conditions: (a) Ethyl formate, 80°C, 6 h; (b) POCl₃, CH₂Cl₂, 0°C, 4 h; (c) Triphosgene, THF, 50°C, 3 h; (d) Iodomethane, DIPEA, DMAc, 40°C, overnight

Figure S4. Synthetic scheme for the synthesis of biotinylated evodiamine (biotinylated Evo). Reagents and conditions: (a) $(\text{Boc})_2\text{O}$, TEA, THF, 0°C to rt, 99%; (b) Propargyl bromide, K_2CO_3 , DMF, 0°C to rt, 56%; (c) TFA, DCM, 0°C to rt, 98%; (d) Ethyl formate, 80°C , 56%; (e) POCl_3 , DCM, 0°C to rt, 81%; (f) Triphosgene, THF, 50°C , 95%; (g) DIPEA, MeI, DMAc, 0°C to 40°C , 76%; (h) **A**, DCM, 50°C , 66%; (i) NaN_3 , KOH, DW, 45°C , 77%; (j) N-succinimidyl D-Biotinate, TEA, MeOH, 33°C , 97%; (k) **B**, Sodium L-Ascorbate, CuSO_4 , $t\text{BuOH}$, DW, rt, 44%

Figure S5. Stemness characteristics of H1299 cells grown in spheres compared with those grown in monolayer. (A) Differences in morphology (Top) and sphere formation capacity between H1299 cells grown in monolayer and those grown in sphere. (B) Changes in the mRNA expression of stemness markers (*POU5F1*, *NANOG*, and *SOX2*) in H1299 cells grown in sphere by comparison with those grown in monolayer. The bars represent the mean $\pm$ SD; *** $P < 0.001$, as determined by a two-tailed Student's *t*-test by comparison with the corresponding control group. Scale bars: 200 μ m.

Figure S6. Regulation of *HSPA1A* expression in putative cancer stem cells isolated from colon and breast cancer patients-derived tumor cells and the association of *HSPA1A* expression with the HSP system and prognosis in patients with colon and breast cancer. (A) The *HSPA1A* and *HSP90AA1* mRNA expression in putative cancer stem cells isolated from colon and breast cancer patients-derived tumor cells was analyzed by real-time PCR. (B) GSEA of publicly available data for the HSP system-related gene sets in colon and breast cancer. (C) Kaplan-Meier survival analysis for the association of *HSPA1A* expression with overall survival of patients with colon and breast cancer. The bars represent the mean $\pm$ SD; ** $P < 0.01$ and *** $P < 0.001$, as determined by a two-tailed Student's *t*-test by comparison with the corresponding control group.

Figure S7. Regulation of sphere formation and the expression of stemness markers and the HSP70/HSP90 client proteins by treatment with HSP70 and HSP90 inhibitors in human colon and breast cancer cells. (A-D) Effects of pharmacological inhibitors of HSP70 (MKT-077) and HSP90 (17-AAG) on sphere formation (A, B) and protein expression of CSC markers and clients of the HSP system (C, D) in HCT116 and MDA-MB-231 (MDA231) cells grown in normal adherent conditions, as determined by the sphere formation assay (A, B) and Western blot analysis (C, D). The bars represent the mean $\pm$ SD; * P < 0.05, ** P < 0.01, and * P < 0.001, as determined by a two-tailed Student's t -test by comparison with the control group.**

Figure S8. Changes in the global protein expression by treatment with 17-AAG and MKT-077. H1299 and H460 cells were treated with the indicated compounds for 2 days. Cell lysates were separated by SDS-PAGE, followed by Coomassie brilliant blue staining.

Figure S9. Regulation of total and phosphorylated forms of HSP70/HSP90 client proteins by treatment with evodiamine in human colon and breast cancer cells. Effects of evodiamine (Evo) on the expression of Akt, MEK, and Src and their phosphorylated forms in HCT116 and MDA-MB-231 (MDA231) cells grown in monolayer (left) or sphere-forming (right) conditions were determined by Western blot analysis.

Figure S10. Regulation of HSP70 and HSP90 expression in H1299 cells transfected with HSP70 or HSP90 expression vectors. The protein expression of HSP70 and HSP90 in H1299 cells carrying ectopically overexpressed HSP70 (left) and HSP90 (right) was determined by Western blot analysis.

Figure S11. Effects of evodiamine on the functional features of stem cells of human colon and breast cancer cells. (A, C) The protein expression of stemness markers (A, C) and cleaved forms of PARP and caspase-3 (CI-PARP and CI-Cas3) (C) in evodiamine (Evo)-treated HCT116 and MDA-MB-231 (MDA231) cells grown in monolayer (A) and sphere (C) was determined by Western blot analysis. **(B, D)** Effects of evodiamine on sphere formation capacity of HCT116 and MDA-MB-231 cells were determined by sphere formation assay. **(E)** The effect of evodiamine on the tumorigenicity of MDA-MB-231 cells was determined by limiting dilution assay. Tumor initiating cell frequency was determined by ELDA. The bars represent the mean $\pm$ SD; *** $P < 0.001$, as determined by a two-tailed Student's t-test by comparison with the control (Con) group. Scale bars: 500 μ m (B).

Figure S12. Bioluminescence images showing the effect of evodiamine on *Kras*^{G12D/+}-driven lung tumorigenesis. Representative bioluminescence images are shown in **Figure 6A**.

Figure S13. Representative immunofluorescence images showing the effect of evodiamine on the expression of Oct4 and cleavage of caspase-3 in tumor tissues derived from lung, colon, and breast PDX models. Quantitative analyses of the immunofluorescence images are shown in **Figure 6G**. CI-Cas3: cleaved caspase-3. Scale bars: 50 μ m.

Figure S14. Effect of evodiamine on the expression of HSP70 and HSP90 in cells grown in sphere. The protein expression of HSP70 and HSP90 in evodiamine (Evo)-treated H460, HCT116, and MDA-MB-231 (MDA231) cells grown in sphere was determined by Western blot analysis.

Figure S15. Representative immunohistochemistry images showing the effect of evodiamine on the expression of HSP70 in tumor tissues derived from lung, colon, and breast PDX models. Quantitative analyses of the immunohistochemistry images are shown in **Figure 7D**. Scale bars: 500 μ m.

Figure S16. The control docking experiment result of the Hsp70 with AMP-PNP. The AMP-PNP in the complex structure of Hsp70 (PDB ID: 2E8A) and docking model are shown as pink and yellow green models, respectively. Mg^{2+} ion was adapted from the crystal structure of Hsp70 in complex with AMPPINP (PDB ID: 2E8A) coloured in brown. Oxygen atoms is denoted red.

Appendix 1

Raw data of STR DNA profiles for human cancer cell lines
