<sup>2</sup> School of Biomedical Sciences, The Chinese University of Hong Kong, Hong Kong SAR, People's Republic of China.

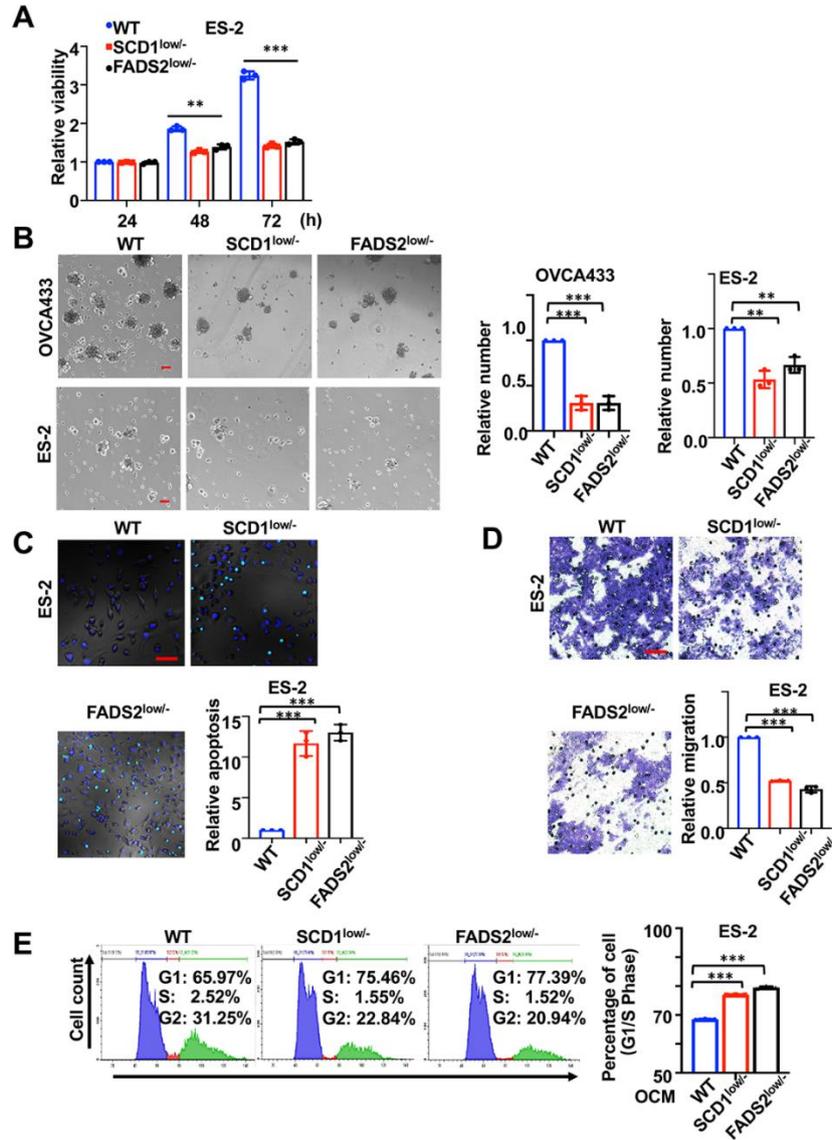

**Figure S1. High expression of SCD1/FADS2 is a poor prognostic indicator for OvCa. Related to Figure 1**

(A) Representative western blot analysis of SCD1 and FADS2 highly expressed in OvCa cell lines compared to HOSEs and negative control cell lines; T-HESCs (Stromal Fibroblasts) and THP-1 (Monocytes).  $\beta$ -actin was used as the internal control. The results are three independent experiments with similar results.

(B) Comparison of *SCD1/FADS2* mRNA expression in multiple clinical tumor samples, including BLCA (Bladder Carcinoma), KIRC (Kidney Carcinoma), HNSC (Head and Neck Carcinoma), CESC (Cervical Cancer), READ (Rectum Adenocarcinoma), BRCA (Breast Carcinoma), ESCA (Esophageal carcinoma), GBM (Glioblastoma), OvCa (Ovarian cancer). Data were retrieved from The Genotype-Tissue Expression (GTEx) project from the TCGA portal. Statistical significance was determined. \* $P < 0.05$

(C and D) TCGA-OvCa database (assessment number: phs000178, n=600) was analyzed (C) Kaplan-Meier survival analysis of indicated groups. Red represents high expression, blue represents low expression; and (D) the mRNA expression of SCD1 or FADS2 in different tumor stages (II, III, IV), normal ovary tissues (normal), primary tumor tissues (primary), and recurrence tissues (recurrence).  $P$ -value was calculated by a two-tailed t-test in R studio.

**Figure S2. SCD1/FADS2 silencing suppresses the oncogenic role in OvCa cells.**

**Related to Figure 2**

(A) XTT cell proliferation analysis shows decreased cell viability in SCD1<sup>low/-</sup> or FADS2<sup>low/-</sup> clones of ES-2 cells.

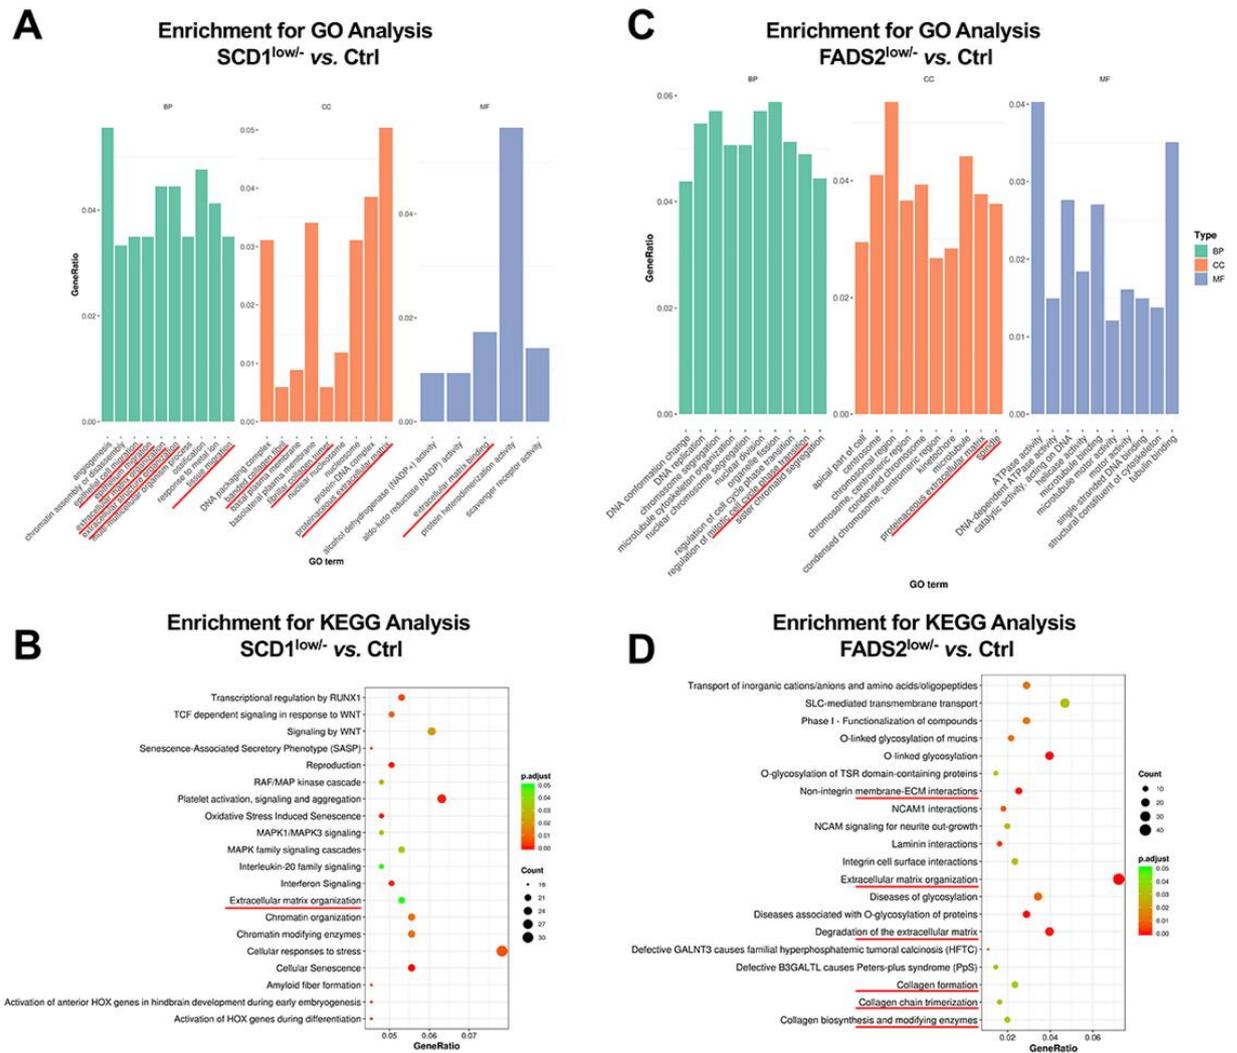

(B) Represented images of tumor-sphere formation in SCD1<sup>low/-</sup> or FADS2<sup>low/-</sup> clones of OVCA433 and ES-2 cells.

(C) Represented caspase3/7 fluorescent images show increased apoptosis in SCD1<sup>low/-</sup> or FADS2<sup>low/-</sup> clones of ES-2 cells. Nuclei were stained by Hoechst (Blue), caspase3/7 positive (Green).

(D) Represented images of Transwell migration assay show decreased migration ability in SCD1<sup>low/-</sup> or FADS2<sup>low/-</sup> clones of ES-2 cells.

(E) Represented images of cell cycle determined by PI staining show G1/S arrest in SCD1<sup>low/-</sup> or FADS2<sup>low/-</sup> clones of ES-2 cells.

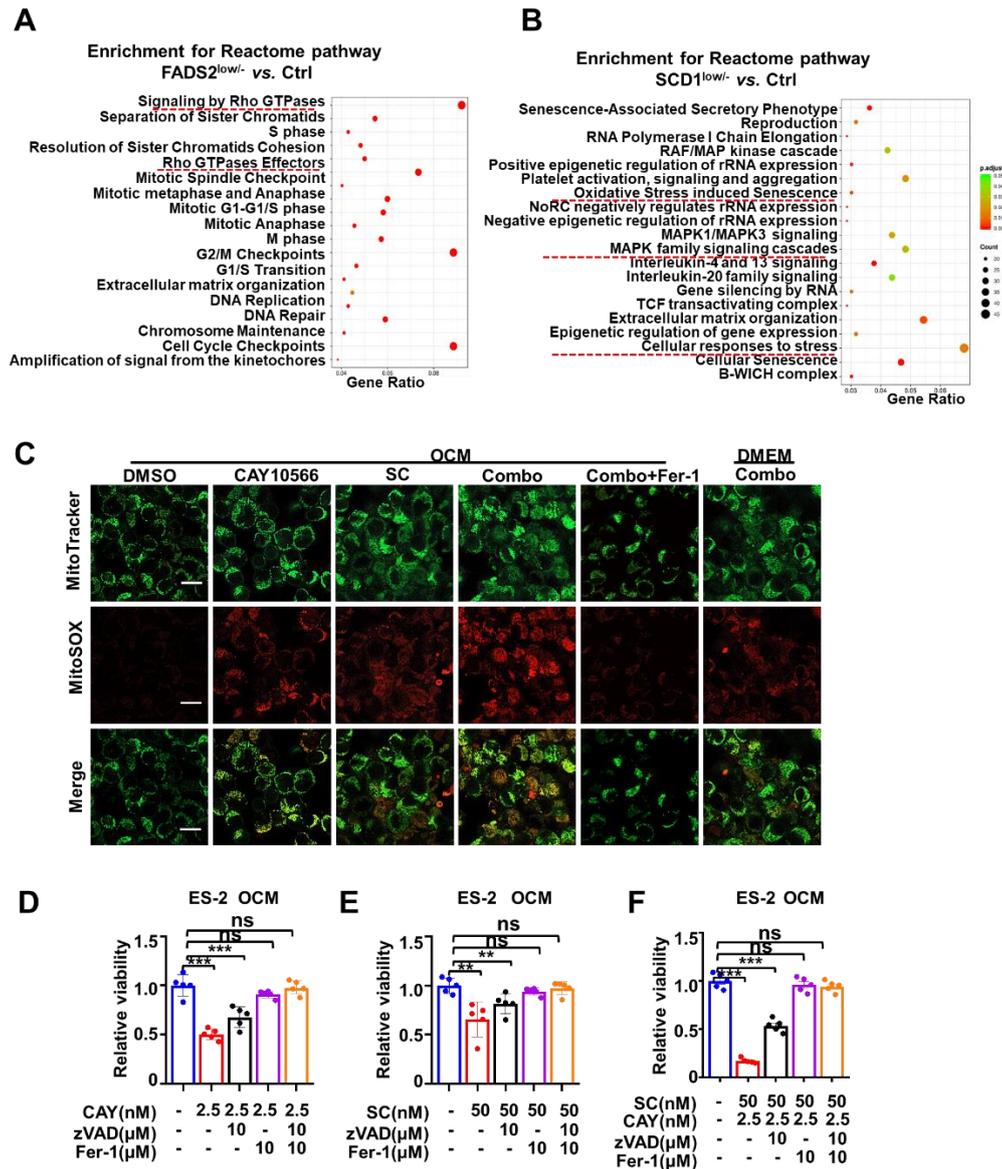

Results in (A-E), SCD1<sup>low/-</sup> and FADS2<sup>low/-</sup> were compared to control wild type (WT). Quantification was mean ± SEM (n=3 independent experiment). Statistical significance was determined by a two-tailed *t*-test. \**P* < 0.05, \*\**P* < 0.01, \*\*\**P* < 0.001.

**Figure S3. SCD1/FADS2 silencing enriched EMT-related biology processes in OvCa cells. Related to Figure 3**

(A, B) RNA-seq GO analysis and KEGG analysis show ECM-related biology processes in SCD1<sup>low/-</sup> clones of OVCA433 cells.

(C, D) RNA-seq GO analysis and KEGG analysis show ECM-related biology processes in FADS2<sup>low/-</sup> clones of OVCA433 cells.

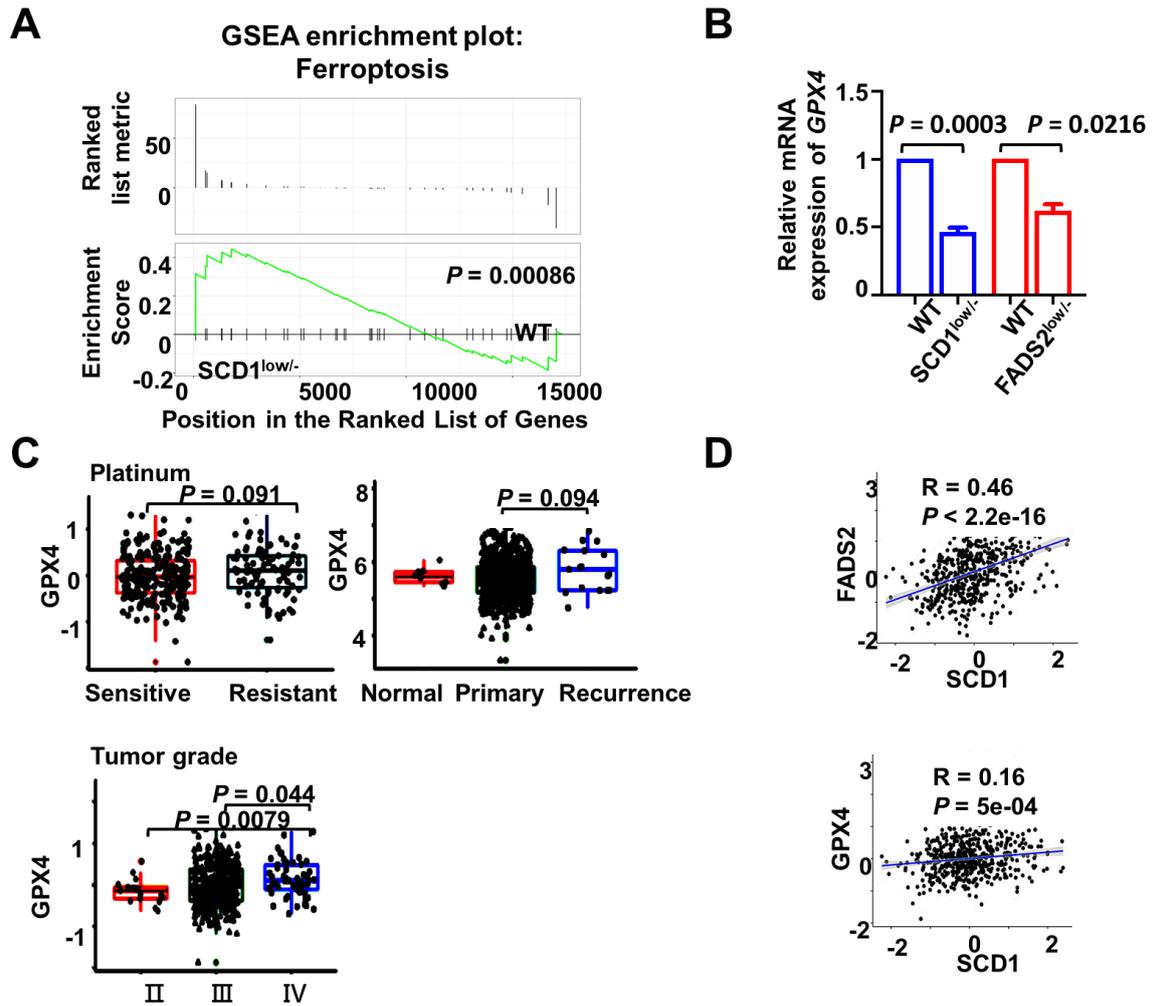

**Figure S4. Silencing of SCD1/FADS2 promotes oxidative stress-related signaling pathways in OvCa cells.**

**Related to Figure 4**

(A) RNA-seq Reactome Pathway analysis shows oxidative stress-related pathway RHO GTPases activated in FADS2<sup>low/-</sup> clones of OVCA433 cells.

(B) RNA-seq Reactome Pathway analysis shows oxidative stress-related pathways activated in SCD1<sup>low/-</sup> clones of OVCA433 cells.

(C) Representative fluorescence confocal images of mitochondrial ROS cells were stained by a MitoSOX probe. MitoTracker dye is the mitochondrial marker, Scale bar, 20 μm. OCM or DMEM cocultured OVCA433 cells treated with SCD1 inhibitor (CAY10566, 5 nM), FADS2 inhibitor (sc26196, 100 nM), lipid ROS scavenger (Fer-1, 10 μM), or combination (CAY10566+sc26196) for 24 h. (D-F) Cells were treated with SCD1 inhibitor CAY (CAY10566), FADS2 inhibitor SC (sc26196), apoptosis inhibitor (Z-VAD-FMK), ferroptosis inhibitor (Fer-1) for 48h. XTT assay detected cell viability after each treatment in OCM cocultured ES2 cells. Results in (D-F) are mean ± SEM (n = 3). Statistical significance was determined by a two-tailed t-test. ns > 0.05.

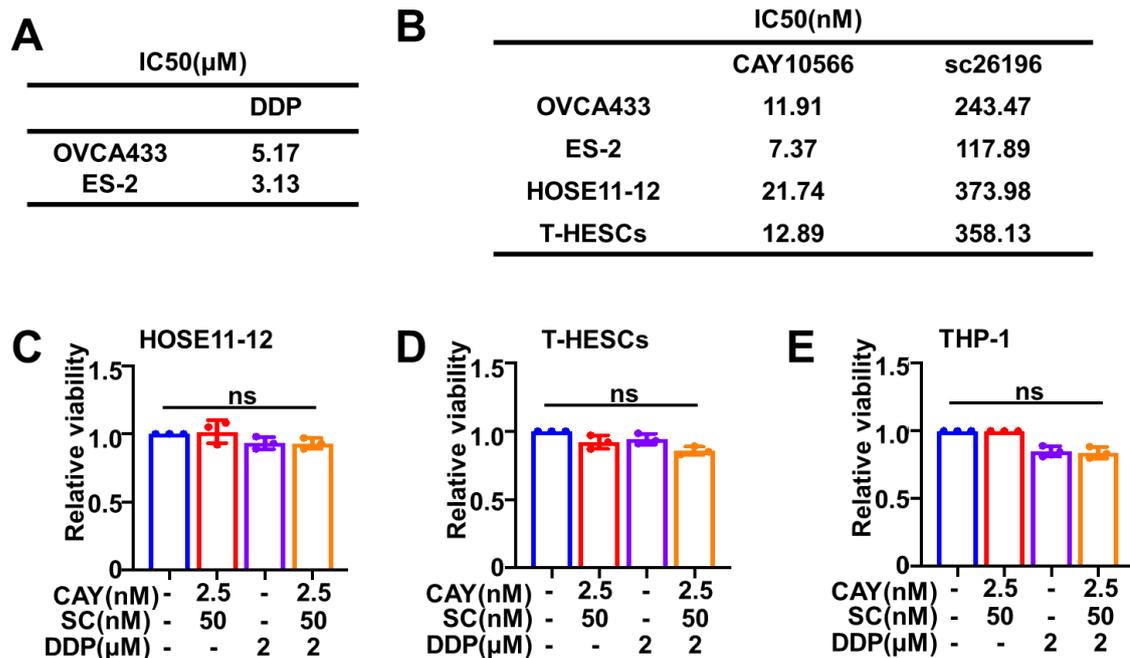

**Figure S5. Silencing SCD1/FADS2 enriches the ferroptosis signaling pathway, and SCD1/FADS2 are positively correlated with GPX4 in OvCa. Related to Figure 5**

(A) KEGG analysis shows the ferroptosis pathway is enriched in SCD1<sup>low/-</sup> clones of OVCA433 cells ( $P = 0.00086$ ).

(B) Bar chart shows fold changes of ferroptosis-related genes mRNA expression in SCD1<sup>low/-</sup> clones of OVCA433 cells.

(C and D) TCGA-OV database (assession number: phs000178,  $n = 600$ ) was analyzed. (C) The mRNA expression of GPX4 and xCT in different tumor stages (II, III, IV), normal ovary tissues (normal), primary tumor tissues (primary), recurrence tissues (recurrence), platinum-sensitive, and -resistance statue.  $P$ -value was calculated by a two-tailed  $t$ -test in R studio.

(D) The positive correlation between SCD1/FADS2 and GPX4 expression was detected. The Pearson's correlation  $P$ -value was calculated in R studio.

**Figure S6. A combination of cisplatin with inhibitors of SCD1 and FADS2 has no toxicity to normal cells.**

**Related to Figure 6**

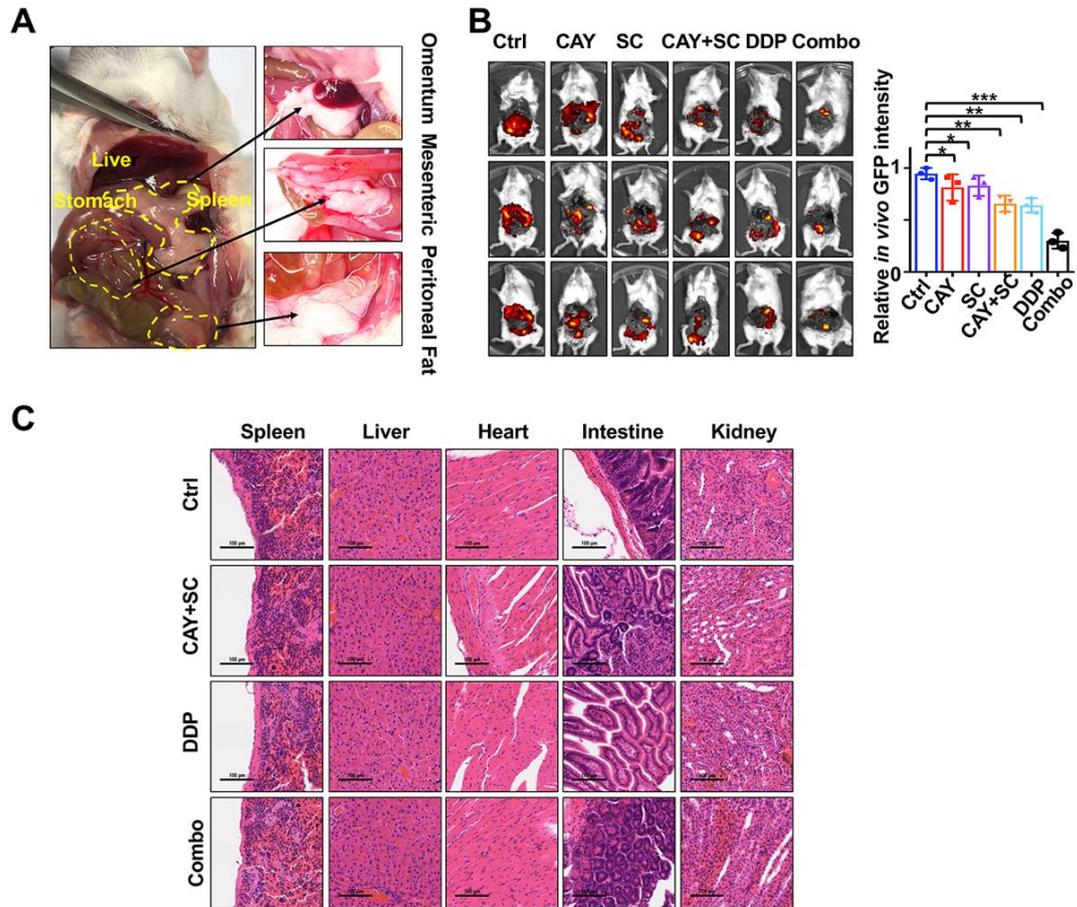

(A) IC50 values of cisplatin for OVCA433, ES-2 cells.

(B) IC50 values of CAY10566, sc26196, and cisplatin for OVCA433, ES-2, HOSE11-12, and T HESCs cells.

Cells treated with SCD1 inhibitor CAY (CAY10566), FADS2 inhibitor SC (sc26196), DDP (Cisplatin) for 48h in (C-E).

XTT assay detected cell viability after each treatment in (C) normal ovarian HOSE11-12 cells, in (D) fibroblast T-HESCs cells, and in (E) macrophage THP 1 cells.

Results in (C-E) are mean  $\pm$  SEM (n = 3). Statistical significance was determined by a two-tailed t-test. ns > 0.05.

**Figure S7. Combined treatment of cisplatin with inhibitors of SCD1 and FADS2 suppresses OvCa metastasis via reducing M2 aggregation**  
**Related to Figure 7**

- (A) Anatomic dissection showing peritoneal fat in mice abdomen.  
 (B) GFP fluorescence IVIS images were obtained after the mice were sacrificed.  
 (C) H&E staining showed histopathology of the kidney, intestines, heart, liver, and spleen of each group of mice. Scale bar, 100  $\mu$ m.

## Materials Table

REAGENT or RESOURCE	SOURCE	IDENTIFIER
Antibodies		
SCD1	Cell Signaling Technology	Cat#2794S; RRID: AB_2183099
